梗概

- 软件产生背景
- 软件下载地址及安装方法
- 用法演示

什么是生理组学…

- The term comes from "physio-" (life) and "-ome" (as a whole). In its broadest sense, the physiome should define relationships from genome to organism and from functional behavior to gene regulation

什么是Jsim…

- JSim is a Java-based simulation system for building quantitative numeric models and analyzing them with respect to experimental reference data.
- JSim models may intermix ODEs, PDEs, implicit equations, integrals, summations, discrete events and procedural code as appropriate.

软件下载与安装

- JSIM 最新版本为 1.6.98
- JSIM 支持windows , linux , MacOS等操作系统，并提供2进制文件下载
- JSIM的运行需要Java Runtime Environment (JRE) 支持
- 解压→JSim_win32→win32→bin→双击运行jsim.bat

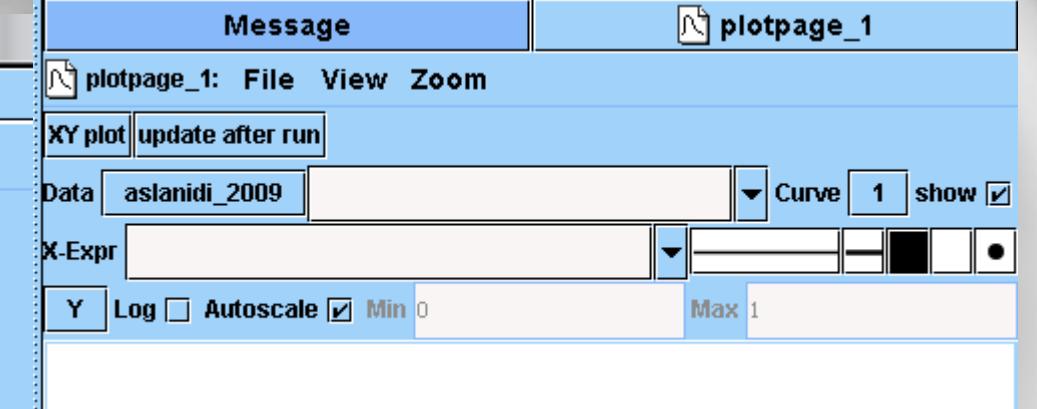

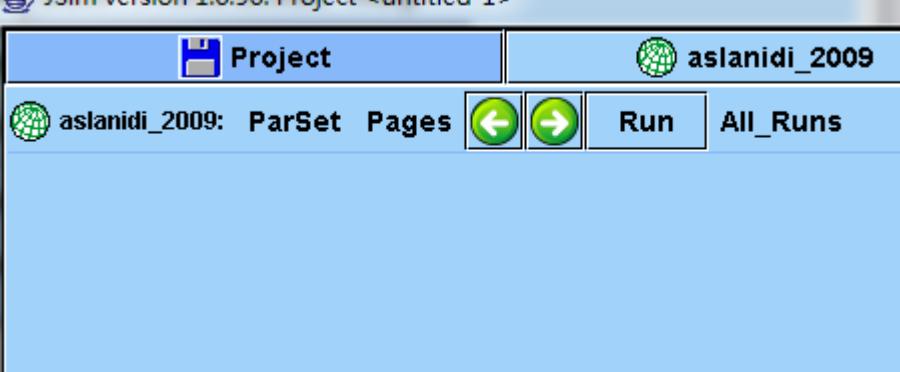

启动界面

```

import nsrunit;
unit conversion on;
// unit millisecond predefined
unit per_millisecond=1E3 second^(-1);
// unit millivolt predefined
unit per_millivolt=1E3 kilogram^(-1)*meter^(-2)*second^3*ampere^1;
unit per_millivolt_millisecond=1E6 kilogram^(-1)*meter^(-2)*second^2*ampere^1;
// unit milliampere predefined
unit per_mAmpere=1E3 ampere;
    
```

WRITING JSIM MODELS

- JSim models are written in JSim's own Mathematical Modeling Language(MML), an easy-to-read text-based language.
- MML models are most often expressed in terms of mathematical equations (for example, ordinary or partial differential equations), but formulation via discrete events and function calls to Java, C and Fortran are also available.
- MML is constructed so that model writers may intermix mathematics, events and procedural code as needed.

```
1 import nsrunit;
2 unit conversion on;
3 // unit millisecond predefined
4 unit per_millisecond=1E3 second^(-1);
5 // unit millivolt predefined
6 unit per_millivolt=kilogram^(-1)*meter^(-2)*second^3*ampere^1;
7 unit per_millivolt_millisecond=1E6 kilogram^(-1)*meter^(-2)*second^2*ampere^1;
8 // unit millimolar predefined
9 unit millimolar2=1 meter^(-6)*mole^2;
10 unit millimolar3=1 meter^(-9)*mole^3;
11 unit millimolar4=1 meter^(-12)*mole^4;
12 unit millimolar_per_millisecond=1E3 meter^(-3)*second^(-1)*mole^1;
13 unit millisecond_millimolar=1E-3 meter^(-3)*second^1*mole^1;
14 unit millisecond_per_millivolt2=1E3 kilogram^(-2)*meter^(-4)*second^7*ampere^2;
15 unit milliS_per_microF=1E3 second^(-1);
16 unit microA_per_microF=1 kilogram^1*meter^2*second^(-4)*ampere^(-1);
17 unit microA_per_microF_2=1 kilogram^2*meter^4*second^(-8)*ampere^(-2);
18 unit microF=1E-6 kilogram^(-1)*meter^(-2)*second^4*ampere^2;
19 // unit microlitre predefined
20 unit cm_per_siemens=.01 kilogram^1*meter^3*second^(-3)*ampere^(-2);
21 unit cm=.01 meter^1;
22 unit cm2=1E-4 meter^2;
23 unit cm_per_second=.01 meter^1*second^(-1);
24 unit joule_per_kilomole_kelvin=.001 kilogram^1*meter^2*second^(-2)*kelvin^(-1)*mole^(-1);
25 unit coulomb_per_mole=1 second^1*ampere^1*mole^(-1);
26 unit microF_per_cm2=.01 kilogram^(-1)*meter^(-4)*second^4*ampere^2;
27 |
28 math main {
29     realDomain time millisecond;
30     time.min=0;
31     extern time.max;
32     extern time.delta;
33     real V(time) millivolt;
34     when(time=time.min) V=-83.43812846286808;
35     real i_stim(time) microA_per_microF;
